THE NEW DOT
CREATIVE EDUCATION NEWSLETTER

Traditional models of professional development cannot equip teachers with 21st century teaching skills and strategies that are necessary to deliver learning in the new normal. The National Education Policy (NEP) 2020 recommends that teachers should participate in Continuous Professional Development (CPD) programs to learn new age teaching skills and understand how to deploy new pedagogies and teaching strategies that will improve their instructional practices and enhance student engagement and learning outcomes.

With a growing trend towards integrating ICT into education, teachers need training to develop their ICT skills. Training through online courses, Learning Management System (LMS), workshops, webinars etc. on ICT skills builds teachers' confidence and supports them to effectively deliver ICT courses in their schools.

Training on soft skills like leadership, effective communication, teamwork, stress management, conflict management, and social & emotional skills helps teachers set up a classroom structure based on a positive, accepting, inclusive, motivated, engaging, and safe learning environment and deliver excellence in teaching.

Crucial 21st Century Teaching Skills include:

ICT Skills

Soft Skills

Stress Management Skills

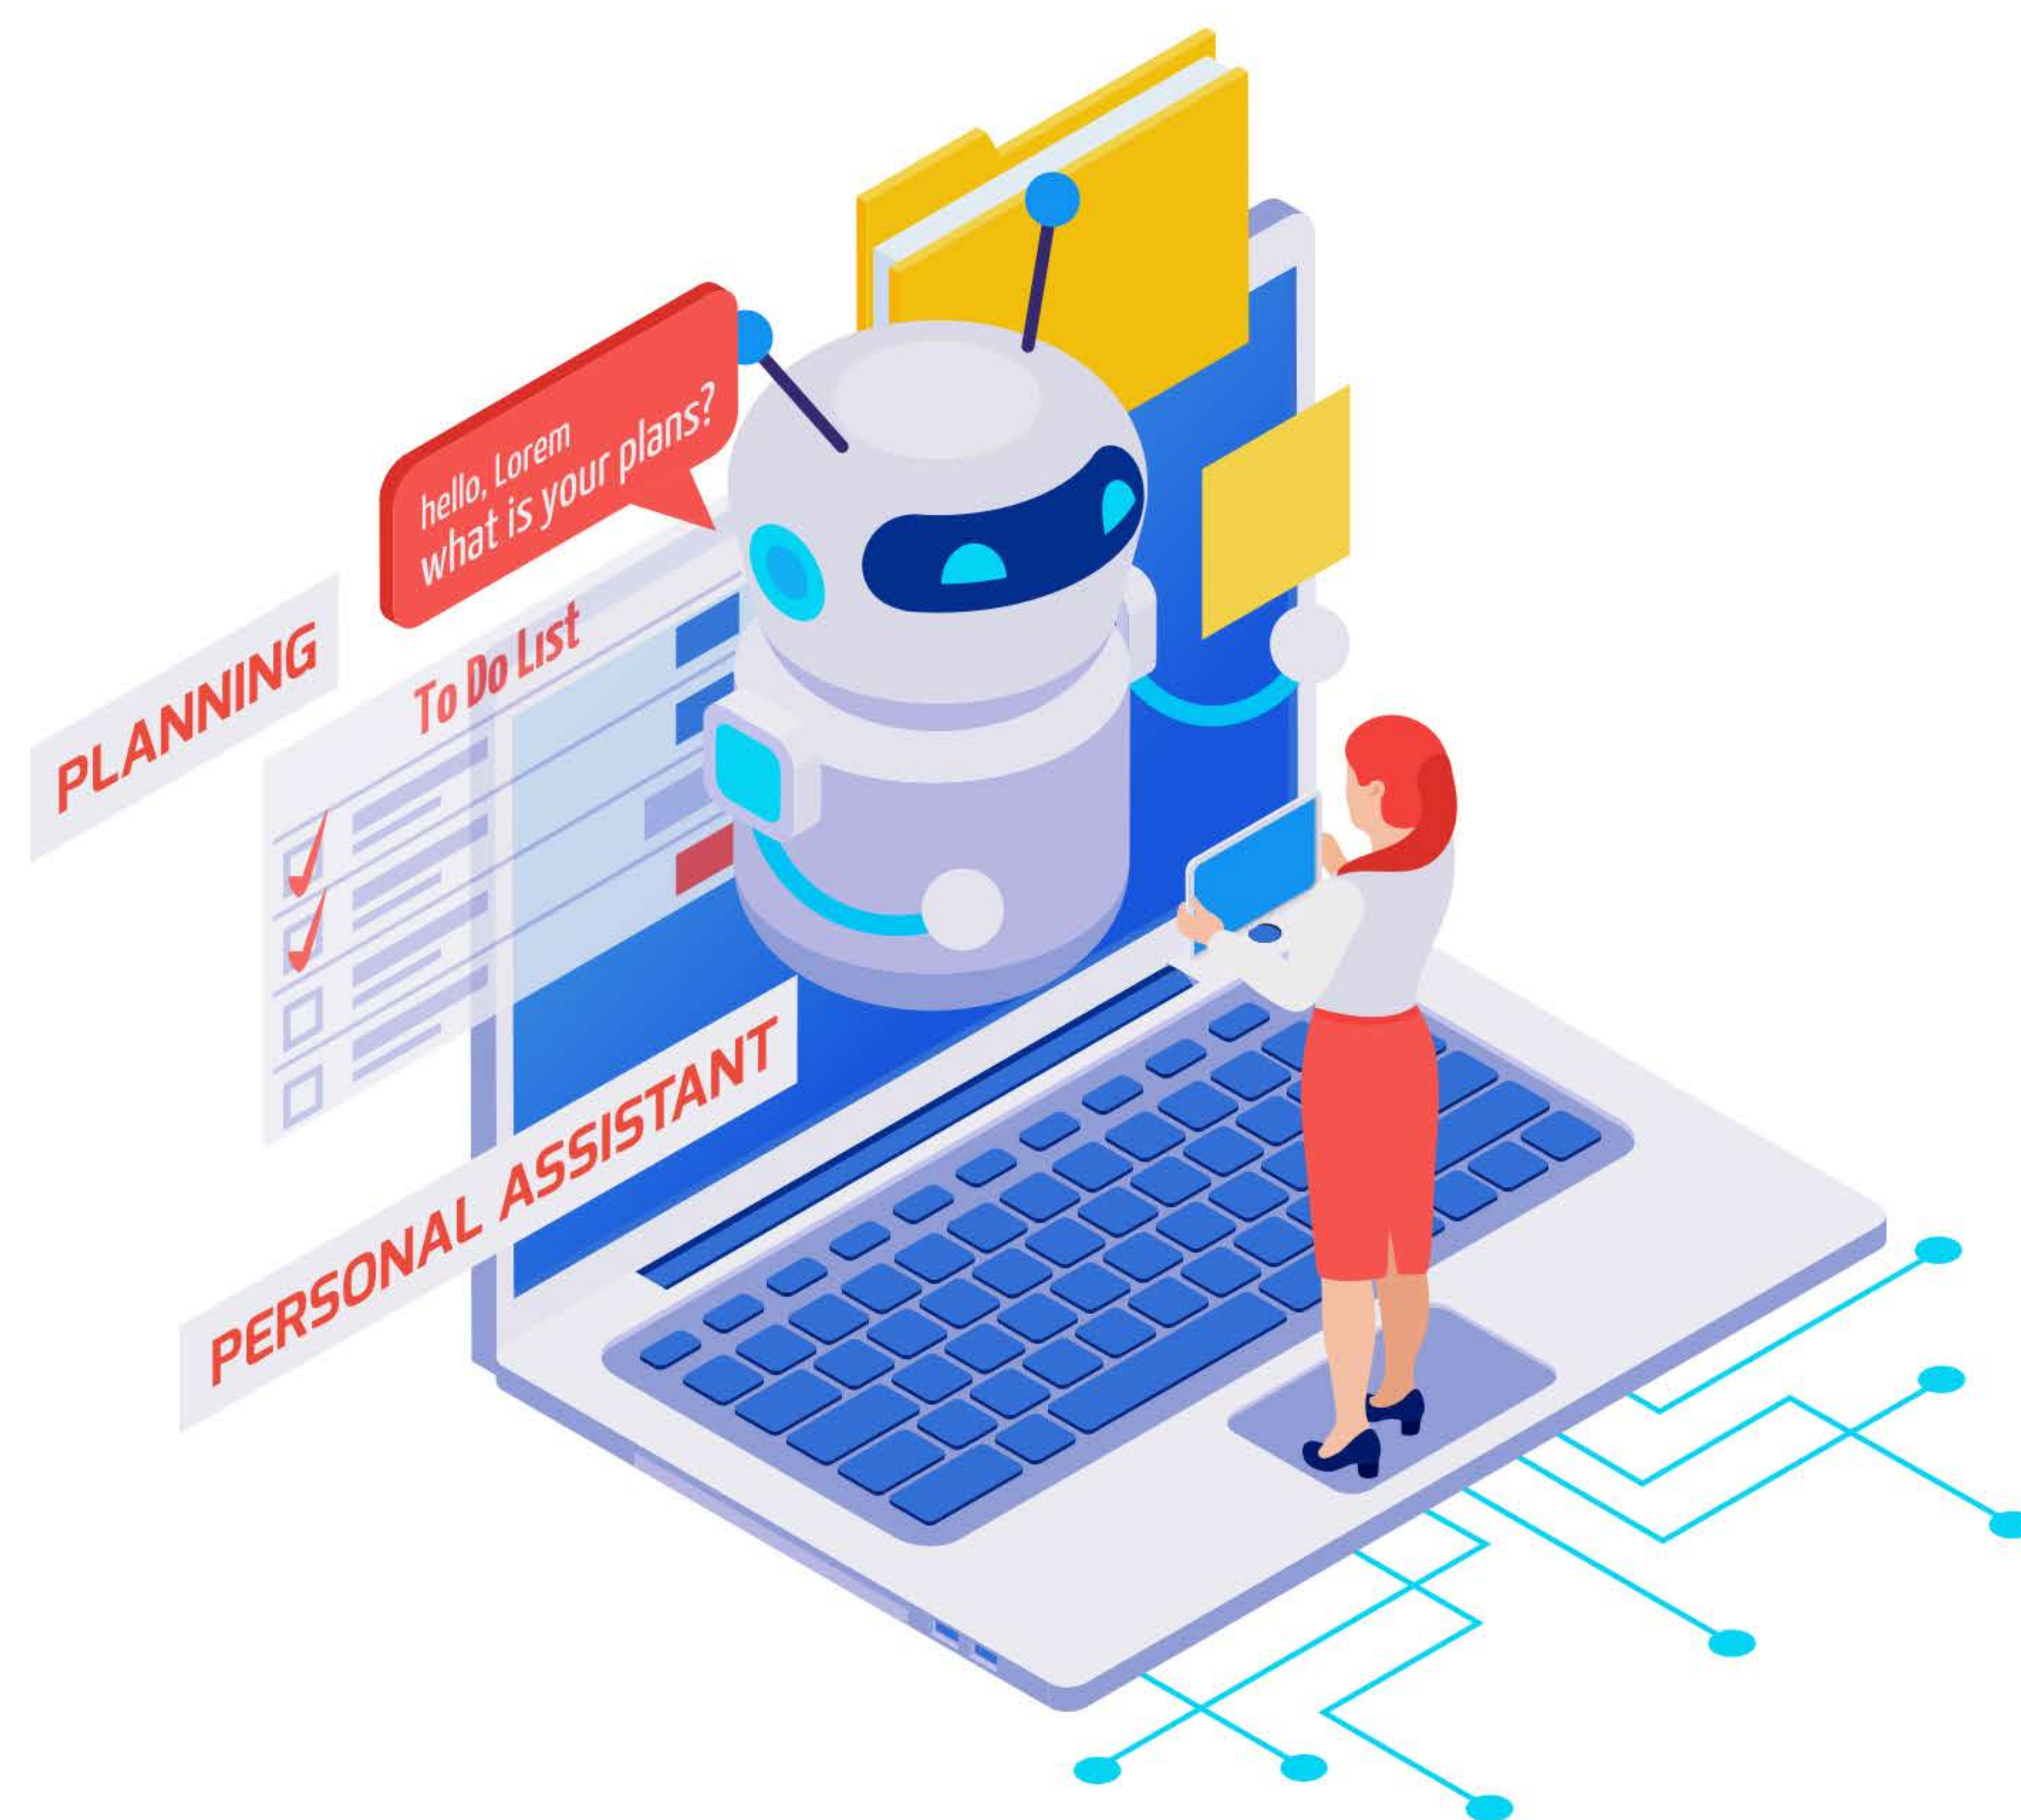

Classroom Management Skills

HERE'S HOW TEACHER TRAINING PROGRAMS HELP DEVELOP 21ST CENTURY TEACHING SKILLS

Teacher Training Program on ICT Skills

As the prevalence of Artificial Intelligence and Machine Learning grows, many professions of today may not exist in the future. It is abundantly clear that automation is the future of work. Today's students need to master advanced technology skills to thrive in the digital future. Hence, schools need to invest in professional development programs to upskill teachers, enable them to stay abreast of the rapidly evolving digital technologies & trends in education and deliver ICT/technology learning effectively. A program on ICT skills helps them master computing concepts and teaches & trains them how to integrate ICT into education. Teachers explore different instructional practices like flipped classroom, e-learning and more. They learn how to use ICT tools to make learning more engaging, digitally assess students' knowledge & understanding in real-time and deploy best pedagogical practices to equip students with 21st century skills.

Teacher Training Program on Soft Skills

Teachers' proficiency in their subjects – be it Science, Math or History makes them good teachers. But, apart from being experts in their specialised subjects, they also need to have soft skills that can help them become more effective teachers and better connect with students, colleagues, and parents of students. With a program on soft skills, teachers acquire knowledge and tools about effective communication, teamworking, conflict management, meeting management, and team management through practical examples. In addition, the program also enhances their employability competences and career potential.

Teacher Training Program on Stress Management Skills

From undisciplined students and parents' behaviour to workplace conflicts and deadlines – stress and mental health issues have been on the rise for teachers for quite some time. The pandemic has amplified their stress while bringing a new awareness that teachers need support in maintaining their mental health and wellbeing. With a program on stress management skills, teachers understand the causes and effects of stress, learn about their individual patterns of stress response, and explore how to apply stress management tools to different educational issues/situations. Through practical examples, they discover effective methods to manage stress at school as well as in their personal lives. Teachers also learn about simple relaxation and visualization activities to ease students' anxiety and help them deal with stress in healthy ways.

Teacher Training Program on Classroom Management Skills

Classroom management skills help teachers to create and maintain appropriate behaviour of students, increase student engagement, facilitate social and emotional growth, and enhance prosocial behaviour. A program on classroom management skills develops teachers' classroom management skills with engaging, interactive & reflective methods, trains them how to include classroom management strategies in their education programs, resolve conflicts, create a safe, inclusive & positive learning environment for students and achieve their teaching goals. They explore trending innovative pedagogies, learn to analyse & improve their current teaching methods to develop student-centered instructional strategies, incorporate ICT tools for interactive learning experiences, and foster a collaborative community that promotes student voice, creativity, leadership, and teamwork.
